WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Print from the model file (cad/step/picoflow-runner.step), hub down, with supports under the buckets. 200 mm across, 50 mm tall, about 525 g and 21 h at 0.4 mm; four perimeters.

20 buckets on a 150 mm pitch circle; the jets strike the top of the bucket band, which is 17 mm above the runner's mid-height.

Hub: 80 mm across, 50 mm tall, 20 mm bore. Ream the bore to slide on the shaft. Press four M5 heat-set inserts into the hub top on a 44 mm circle with a soldering iron.

Balance: hang the runner on a rod through the bore; if one side always drops, sand the bucket backs on that side lightly.

Fit: the clamping hub bolts to the hub top with four M5 screws.

Check: the runner spins on a rod and stops in random places.
