WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut 303 mm of 315 mm pipe. Wrap a strip of card round the pipe as a guide, saw square with a fine-tooth saw, and file both ends flat.

Two nozzle holes, on opposite sides, each with four bolt holes. Tape the full-size template (nozzle hole template) to the pipe: its centre line is 208.6 mm up from the bottom end; the second hole is the same, turned half a turn round the pipe.

Chain drill inside the hole outline with 6 mm, cut out with a jigsaw, file to the line. Drill the eight bolt holes 6.6 mm square to the wall.

The holes are larger than the nozzle tip by 2.5 mm all round; the nozzle saddle and its gasket cover them.

The 3 mm at the top sits in the groove under the lid.

Check: each nozzle passes through its hole without touching the edge.
