WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut five lengths of 90 mm pipe (for sockets 45 mm deep; adjust each by the difference if your fittings differ):

P1 tee branch to first elbow, 275 mm; P2 long run, 970 mm;

P3 short drop, 135 mm; P4 last elbow to jet 1 coupling, 100 mm;

P5 reducer to jet 2 coupling, 110 mm.

The valve's pipe piece enters the 125 mm run of the tee; the other end takes a 125 x 90 reducer and P5 to jet 2. The 90 mm side branch takes P1, then elbows and P2, P3, P4 round the housing to jet 1.

Dry fit everything on the stands first. Then solvent weld the PVC joints, one at a time, keeping the elbows square.

Flexible couplings join P4 and P5 to the nozzle spigots; band clamps snug, not crushed. Do not glue the nozzles.

Check: centre line 338 mm above the pad all round.
