WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Tub: about 560 x 460 x 400 mm outside, stiff polyethylene.
Outlet: 128 mm hole centred 110 mm up in the downstream end, for a 125 mm tank connector (gasket inside, nut outside).
Overflow: cut a notch 200 mm wide and 40 mm deep in the upstream rim, so surplus water and leaves run off away from the outlet.
Screen frame: 20 x 20 x 3 mm aluminium angle, 600 x 500 mm outside, mitred and riveted; it rests on the rim and overlaps it by 10 mm all round.
Screen: 6 mm stainless mesh cut to 580 x 480 mm, riveted to the frame.
The stream is led onto the screen; water drops through, surplus runs over and carries leaves away.
Check: no gap larger than 6 mm anywhere round the screen.
